Eric,

I just had an informative discussion with Jim Belke on our reg side of OEM.

Looks like 5,000 lbs of Ammonia Nitrate was a "screening" threshold which would have triggered a letter from DHS to further assess the facility for the CFATS program.

Jim is available if you would like to learn more about CFATS and / or RMP. 202-564-8023.

Thanks,

Christopher Burgess

We are wondering what the specifications are for a company to register with the DHS CFAT program. According to the news report below the company was not registered.

<http://www.reuters.com/article/2013/04/20/us-usa-explosion-regulation-idUSBRE93J09N20130420>

We did some research regarding the program and found this [site](#). Can you ask around for more info?
